

CENTER HALL APARTMENT STRUCTURE FIRE

Victims come first in our decision making. We respond to all reports of smoke or fire in a building assuming there is a working fire with trapped victims. The strategy is offensive unless stated differently. Rapid water to the seat of the fire should be emphasized in order to protect victims and facilitate the primary search.

1st Arriving UNIT - Size up, assume command, perform 360 (if applicable), and provide a follow-up radio report to confirm the IAP.

Rescue: If the first arriving engine goes to effect a Rescue, subsequent engines should move up on arrival assignment order to manage fireground priorities.

1st Engine – Drive to the scene

Investigation • Fire attack

1st Truck – Drive to the scene

Investigation • Search

1st Battalion – Drive to the scene - Receive command transfer from initial IC. Complete 360 (if applicable)

Incident Command
